Get started with our controls in minutes. Stop wasting your time One tutorial says one thing and another says something completely different. Some teach the basics, but why is there nothing that shows how to fit all the pieces together? and trying to learn a new framework from piecing together API docs can be tough. There are not many good screencasts or tutorials out there that teach how to maximize the framework. don't waste it sifting through blogs. The vocabulary is foreign, how is a directive component different from a bare component? How am I supposed to update my page with one-way data binding? Do I have to learn annotations, strong-typing, and a whole new language just to use Angular now? Angular 11 has a whole new model of writing apps. How can you know how it all fits together? You still have a job to do and stopping to learn Angular 11 seems like a risky use of time. There are several new forms of syntax you'll need to learn to use Angular effectively and we teach all of them in the book. Mouse over the red dots below to see each form explained. The @ is an annotation and it comes from TypeScript Components teach your browser new tags Using ` backticks allows for easy inline templates Views can be defined by the template option Use [] brackets on an attribute to pass parameters to the directive Use the * on an attribute to use a directive on this element TypeScript allows you to define classes using the class syntax Use () parenthesis to specify action bindings One-way data binding means we fire events instead of modifying data directly TypeScript lets us define collections that contain our custom type Product Our class defines actions that we can use in our view 1 @Component({ 2 selector: 'products-list', 3 template: ` 4 5 8 9 10 ` 11 }) 12 13 class ProductsList { 14 @Input() products: Product[]; 15 @Output() selected: EventEmitter; 16 17 constructor() { 18 this.selected = new EventEmitter(); 19 } 20 21 clicked(product) { 22 this.selected.emit(product); 23 } 24 } ng-book is designed to teach you step-by-step how to create serious Angular apps: from empty-folder to deployment.
